“ A 365-day civic operating system that bridges everyday road defect sensing with sub-RM120 IoT river flood telemetry for high-risk flood territories.”

When the signal arrives late, the response arrives late.

~ Kota Bharu, Kelantan flash flood 2014. Image from mStar

77,000+

citizens displaced during a single Kelantan flood event in December 2024

14-30+ DAYS

delay in complaint-to-triage cycles

Fragmented. Disconnected.
Messages get lost.

The problem isn't a lack of data. **It's a lack of connection.**

WE DIDN'T START WITH AN IDEA. WE STARTED WITH EVIDENCE.

This is not just a concept.
There is already something
to **demonstrate**.

BUILT

Working PWA interface

TESTED

Live water-level telemetry dashboard

VERIFIED

Map of PPs mapped and verified

One civic pulse. Four everyday engines.

NADI is not another app. It is the civic layer connecting existing systems.

Others solve one civic moment.

NADI connects the **entire cycle**.

	MOST SOLUTIONS		NADI
ROAD ISSUES	Manual reporting	→	Passive sensing
FLOOD MONITORING	High-cost infrastructure	→	Low-cost sensor network
CONNECTIVITY	Often cellular-dependent	→	Long-range local communication
CIVIC ENGAGEMENT	Event/problem based	→	365-day engagement
DATA	Fragmented	→	Connected
RESPONSE	Manual triage	→	Prioritized intelligence

RM113

Target cost per sensor node

RM80K+

Traditional telemetry station

TARGET / ESTIMATE – SUBJECT TO PILOT VALIDATION

365 DAYS OF VALUE

NADI doesn't replace existing systems. **It connects the gaps between them.**

One platform. Two powerful partners.

Government

PBT	Prioritize verified complaints
JKR	Road and infrastructure intelligence
JPS	Expand localized flood monitoring
NADMA	Faster response coordination
SUK	Statewide visibility

Business

Logistics/Delivery	flood-risk routes + recurring road issues
Construction	local infrastructure and site-risk intelligence
Insurance	future localized risk intelligence
Local Merchants	local discovery + 0% commission marketplace

Businesses use NADI to reduce disruption and make better local decisions.

PROPOSED BUSINESS MODEL

Start in Kelantan. Build for Malaysia.

Prove locally. Scale nationally.

IMPACT AT SCALE

HOUSEHOLD

RM50K

Illustrative potential
— requires validation

GOVERNMENT

40%

Pilot target —
to be validated

LOCAL ECONOMY

0%

NADI local marketplace
commission

WHERE NADI DEPLOYS

We don't need to build everything. We need permission to **prove it**.

DATA PARTNERSHIPS

with PBT / JPS / JKR / NADMA

PILOT ACCESS

to selected high-risk locations

SYSTEM INTEGRATION

with existing agency workflows

SEED PILOT FUNDING

to deploy the first 5-node river pilot

60-DAY ROADMAP

A safer Malaysia
doesn't need more
disconnected systems.

It needs
a stronger pulse.
